

IRQA Virtual Academy

Web Platform Architecture & UI/UX Production Report

1. Executive Brief & Project Scope

This document outlines the engineering specification and design rhythm for the new IRQA Virtual Academy web platform. The primary goal of this application is to serve as a high-conversion, premium landing hub for live 1-to-1 online mathematics tuition targeting parents and students across the UK and Europe.

2. Strategic Component Architecture (What Will Be Made)

Following a structural audit of the layout blueprint from the reference platform (<https://international-islamic-center-rx5x.vercel.app/>), the web platform will be built utilizing a modular component architecture in React and styled with utility-first Tailwind CSS classes:

- **Sticky Glassmorphic Header:** A persistent top navigation bar engineered with a backdrop blur effect. It houses the platform branding, responsive menu toggles, and an immediate high-priority call-to-action button for booking free trials.
- **Choreographed Hero Stage:** The primary viewport entry point that frames the value proposition (focused 45-minute live lessons aligned with British and European standards).
- **Core Benefits & Trust Matrix:** A grid layout communicating operational parameters (homework support, structured revisions, and 1-to-1 live settings).
- **Syllabus Hub:** A responsive interactive module breaking down curriculum topics clearly to maximize organic authority and structural transparency.
- **Dynamic Pricing System:** A clear 3-column layout showcasing subscription paths without friction.
- **Onboarding Intake System:** A multi-step lead capture form optimizing customer acquisition flow for parents.

3. Functional Data & Curriculum Mapping (What Will Be Added)

The platform will explicitly incorporate the academic and financial pathways established in the academy framework:

Academic Framework Coverage:

- **Curriculum Standards:** British National Curriculum, GCSE Maths, IGCSE Maths, and basic European school mathematics tiers.
- **Core Modules:** Basic Mathematics, Algebra, Geometry, Fractions, Percentages, Trigonometry, Statistics, and Complex Problem Solving.
- **Session Parameters:** Fixed 45-minute individual focus periods featuring integrated homework help and systematic revisions.

Subscription Matrix:

Package Tier	Weekly Schedule	Monthly Fee
3 Days Plan	Monday – Wednesday	£80 GBP
2 Days Plan	Thursday – Friday	£60 GBP
5 Days Plan	Monday – Friday	£120 GBP

4. Motion Design & CSS Interaction Skillset (The Visual Polish)

To ensure the landing page feels fluid, organic, and professional, the interface will break out of flat design trends using high-performance micro-interactions:

- **Staggered Viewport Entrances:** Content nodes use an observer hook to translate upward and fade into view sequentially (0.1s stagger delay offsets) instead of snap-rendering.
- **Tactile 3D Hover Elevations:** Curriculum elements and subscription cards utilize custom transition filters, applying a 3D lift (scale 1.03x) and a smooth, expanding multi-layered CSS drop shadow.
- **Liquid Button Fills:** Navigation and form action elements utilize smooth cubic-bezier transitions on background hover states for a clean, professional feel.
- **Floating Input Micro-animations:** Text inputs within the onboarding intake form shift their baseline layout and label scales seamlessly when gaining focus.
